

CREED Example Lab Guide (Modify for Your Experiment)

Steps for Setup

Print Session Attendance List

1. Log into `creedexperiment.nl` (see last section for login info).
2. Open the existing experiment.
3. Select the experiment (e.g., `EX...`).
4. Go to *Show sessions*.
5. *Lablist* the session and print the attendance list.

Before Session — In Lab

You run the study from the oTree Lab Launcher. This is a file on the control PC desktop that opens the launcher app. Once your lab manager has set it up, getting ready takes three clicks: Browse, Get ready for the lab, and Launch.

1. On the control PC, open the oTree Lab Launcher from the desktop.
2. Click **Browse** and point it at your study folder.
3. Click **Get ready for the lab**. In one step this wires up the participant computer seat links, the seat labels, and the shared lab database.
4. Boot up the participant computers, at least as many as people on the attendance list. Do **not** click Launch yet.

Before Session — Participants

1. Check in participants:
 - Cross-reference student ID with the Session Attendance List.
 - If anyone must be sent away, pay € 5 show-up fee.
2. Guide participants into the waiting room.
3. Update setup based on show-ups:
 - On the control PC, confirm the correct number of participant computers are ready.
 - Click **Launch now**. This starts the server and each lab computer opens its own seat link.
 - Watch the seats fill on the monitor: each station turns green as someone arrives.

Entering Participants into Lab

1. Introduce yourself to participants in the waiting room.
2. Individually hand out cubicle number cards and send participants to the corresponding PC.

After Session

1. Save all data onto a USB stick and/or the researcher folder on the desktop.
2. Fill out the `creedexperiment.nl` session log:
 - Go to the session page.
 - Finish session.
 - Enter participant status (show, late, no-show, sent away).
 - Record any session errors.
 - Finish session (finalise).
3. Stop the server (CTRL+C).
4. Close out and shut down all computers.
